## **Carroll Technologies Expands West Again**

*Now Serving Major Underground Mining Operations All Across the USA*

**Beckley, West Virginia, January 6, 2011** ---- Carroll Technologies Group, America's largest independent electronic services organization to the coal industry, today announces the opening of its 12<sup>th</sup> new operations center for sales and service, located near Grand Junction Colorado. According to Mike Hastings, President of Carroll Technologies, "This new distribution and service center further demonstrates the fulfillment of our vision to become a truly national distribution and service partner to the mining industry across the USA. We now have 12 operations centers in seven states and expect to continue the dramatic growth we have experienced with our customer base. This latest expansion in the Western US brings us to two western locales."

The new Colorado branch will be managed by Bill Austin, a long-time veteran of the coal mining industry. Carroll's new operations center is located at:

1472 Highway 50

Delta CO, 81416

Telephone: 970-261-7138

E-mail: [ba@carrollengineeringco.com](mailto:ba@carrollengineeringco.com)

Like the company's other operations centers, the new Grand Junction Colorado center will include sales, service, and repair operations as well as an extensive spare parts depot. Also, it will provide around the clock responsiveness to customer calls for help through Carroll's networked MinerCare 24/7<sup>TM</sup> service organization.

Mike Hastings also indicated that the company's expansion plans are continuing—both geographically and through the merger with other companies as indicated by the recent combination with Reliable Mine Service Company. The company maintains an inventory of over \$6 million in parts, components, and replacement spares. Hastings stated that, "Our customers operate 24 hours a day. Mine stoppages cost money. When they need service or a spare, they need it right away – not in days or weeks. We continue to open operations centers to properly support our customers. We've got to be where the business is happening."

### **About Carroll Technologies Group**

Carroll Technologies Group consisting of Delta Electric, Inc. and Carroll Engineering Co. has been servicing the mining industry in North America for over 30 years. From its early history in the coalfields of West Virginia and Kentucky, Carroll Technologies Group has expanded to become the largest privately held and best electronic services group in the U.S.A., providing over 800 mines with advanced technology communications, employee and equipment tracking systems, safety monitoring systems, and a broad range of other safety equipment. Today Carroll Technologies Group and its two operating subsidiaries – Carroll Engineering Co. and Delta Electric Inc.—service the needs of mining companies with a network of 12 distribution centers and Miner Care 24/7<sup>TM</sup> support offices strategically located in 7 states.
